| Question | _ |

| | Consider the set of initi | llv unrelated element | :s 0 | . 1 | . 2. 3 | . 4 | . 5. | 6. | 7. |
|--|---------------------------|-----------------------|------|-----|--------|-----|------|----|----|
|--|---------------------------|-----------------------|------|-----|--------|-----|------|----|----|

Draw the forest of trees and the corresponding array that results from each of the following sequence of operations using the *quick find* algorithm.

What is the expected running time of the union operation in this case?

| What is the expected running time of the union operation i | n this case? |

| Briefly outline the Sele | ection Sort al | gorithm. |
|--------------------------|----------------|----------|
|--------------------------|----------------|----------|

Use your algorithms to sort the following array, showing a trace of the algorithms workings at each stage.

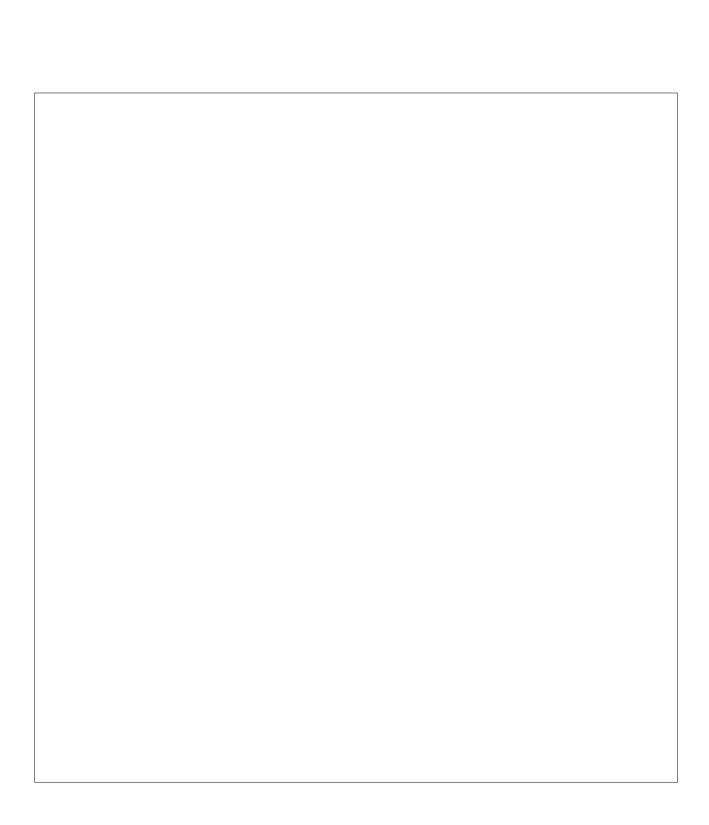

[S,O,R,T,E,X,A,M,P,L,E]

| a | _ |
|----------|---|
| Question | h |
| Question | J |

Use your algorithm to sort the following array, showing a trace of the algorithms workings at each stage.

[17, 22, 65, 91, 37, 52, 40, 12, 41]

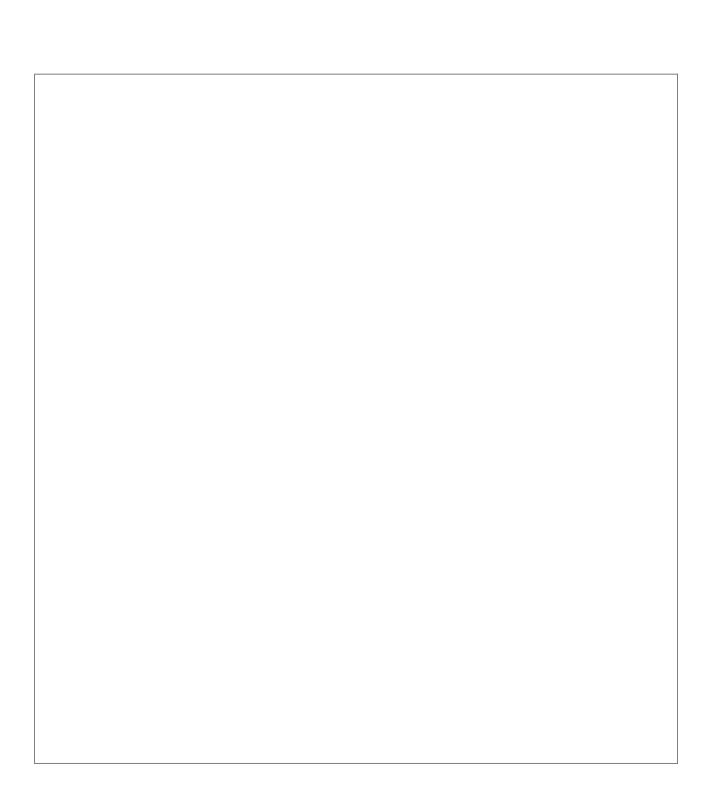

| What does it mean for a sorting algorithm to be stable and why might this matter? |
|--|
| Of the sorting algorithms you have studied, list two which are stable and two which are not stable and for each one briefly show why this is the case. |

Heap Sort is an efficient in-place sorting algorithm. The basic outline for heap sort is:

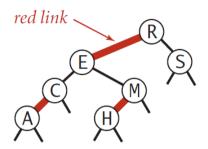

- Create a max-heap with all N keys.
- Repeatedly remove the maximum key.

How is the max-heap constructed? Demonstrate the process for the initial unsorted array below:

Question 9 Describe a Binary Search Tree (BST) and its properties with a suitable diagram. Into your *Binary Search Tree*, *insert* two keys and *delete* the root key (in that order) demonstrating how the BST properties are maintained by each operation.

Consider the following Left-Leaning Red-Black Tree. Add the key Z, then add the key P.

- i. Draw the resulting left-leaning red-black tree.
- ii. How many left rotations, right rotations, and colour flips are performed in total to insert the two keys?
